

# SandBlast Cloud Securing Office 365 Demo

## Europe

### Goal of the demo

The Goal of the demo is to show the integration between Microsoft office 365 email system and the Check Point SandBlast advanced threat prevention system.

In this demo we will use 3 systems: Check Point cloud management, office 365 account, External Webmail.

We will send an email with malicious attachment from the external Webmail to the office 365 account and monitor the connection and review the security forensics report via the cloud management system.

### Credentials

Office 365 – <https://outlook.office.com>

Username – [user1@european-demo.com](mailto:user1@european-demo.com)

Password – Cpwins1!

External email - US – <https://friends.walla.co.il/#/login>

Username - [EU365demo@walla.com](mailto:EU365demo@walla.com)

Password – Cpwins1!

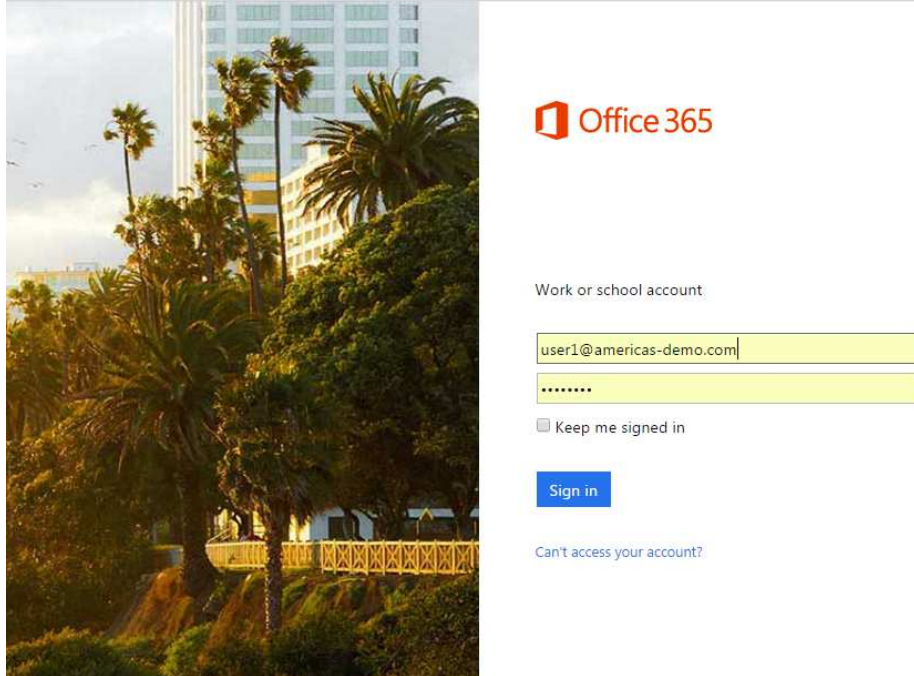

Cloud management

Use your own credentials

If you do not have credentials please contact [sagy@checkpoint.com](mailto:sagy@checkpoint.com)

# Preparation

Open office 365 outlook web client <https://outlook.office.com>

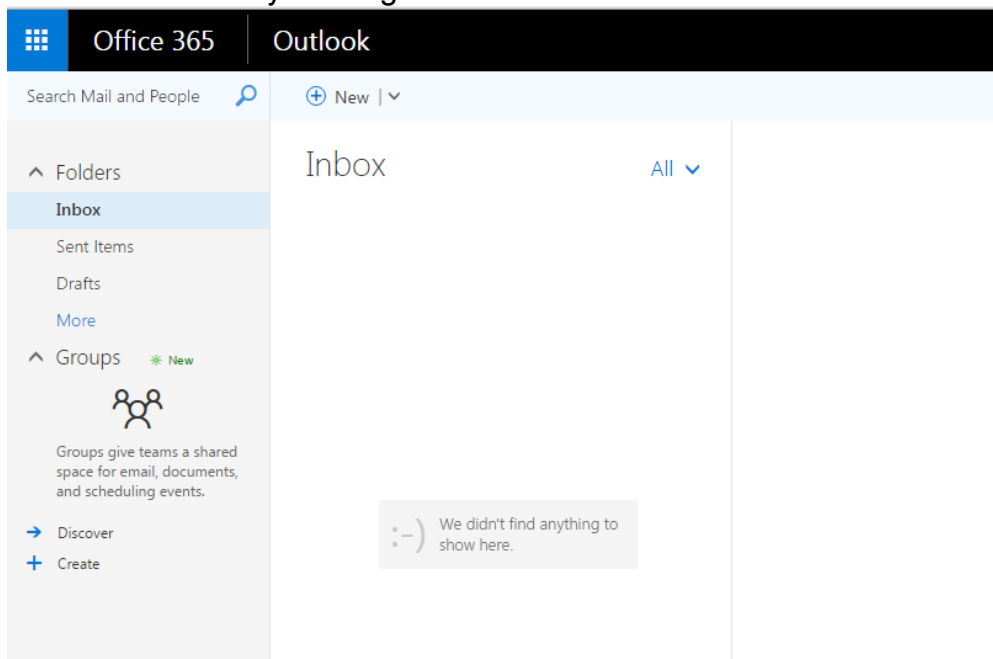

Type in the user and password

Username – user1@ european -demo.com

Password – Cpwins1!

This is the screen you will get

Open cloud.checkpoint.com

Enter your credentials based on the invitation you have received.

If you have not received an invitation please contact [sagy@checkpoint.com](mailto:sagy@checkpoint.com) and ask for credentials (please allow up to 24 hours)

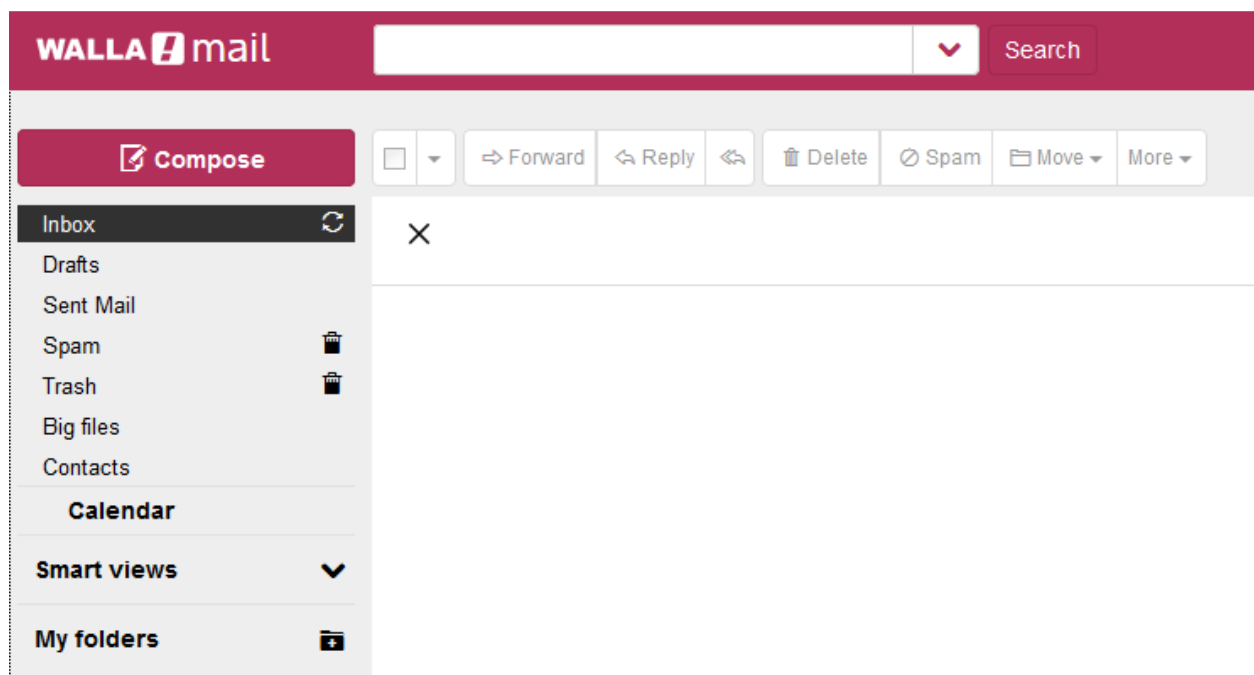

Login to an external email web client

<https://friends.walla.co.il/#/login>

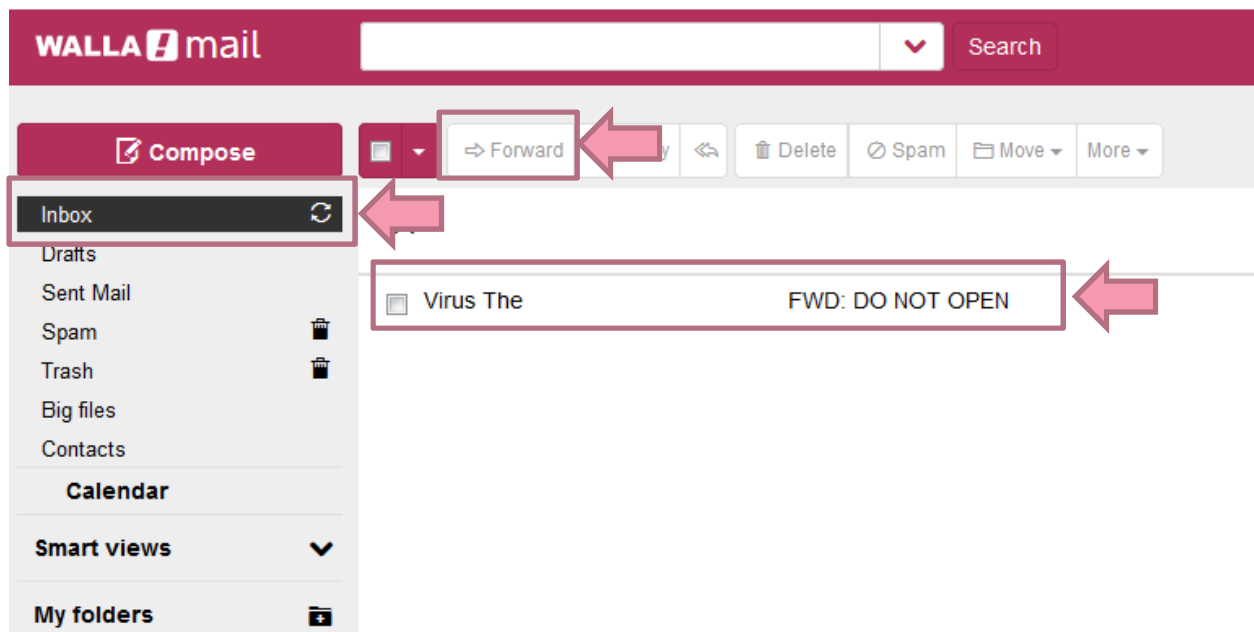

Username - EU365demo@walla.com

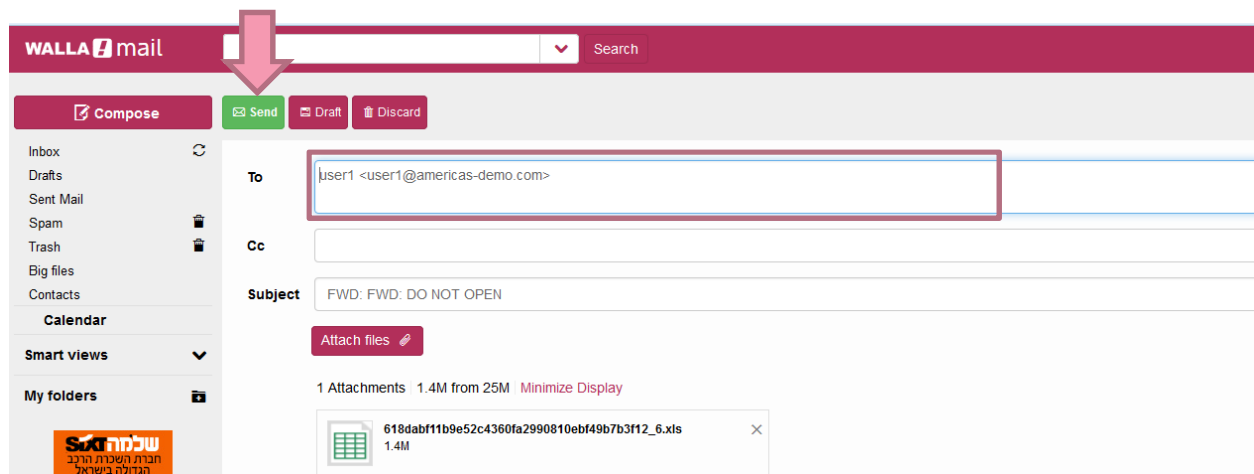

Password - Cpwins1!

Click on Login

After login go to “Inbox” and forward the malicious email with subject “Do Not Open” send it to the office365 email address [user1@european-demo.com](mailto:user1@european-demo.com) And click “SEND”

After clicking “SEND” go to the office 365 console and look for the email.  
If you are in prevent mode the email will appear with a text file attachment stating that the malicious XLS file was removed

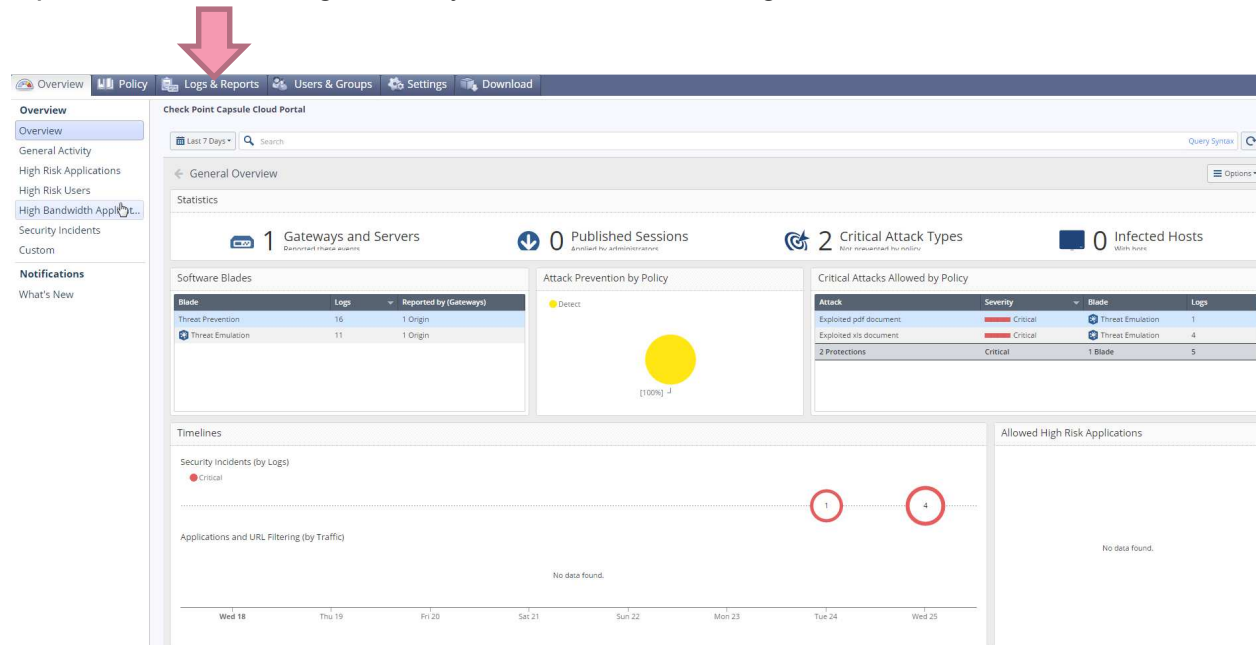

FWD: DO NOT OPEN

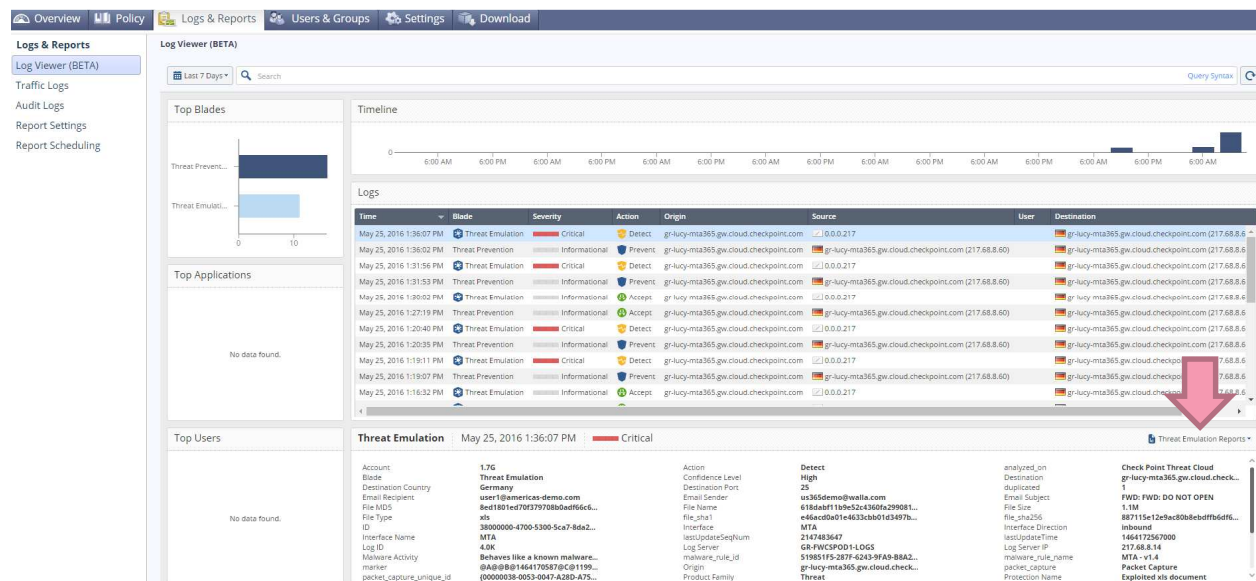

----- Forwarded message -----  
**From:** Virus The <[happyvirus1@walla.com](mailto:happyvirus1@walla.com)>  
**To:** <user1@americas-demo.com>  
**Cc:** US365demo <US365demo@walla.com>  
**Date:** May 25, 2016 13:18  
**Subject:** FWD: DO NOT OPEN

If you are working in detect mode the email with malicious attachment will arrive as is.

Open the cloud management system to look at the logs and activities

In order to follow the logs please click on logs and reports

Under logs and reports you will be able to see the prevent or detect logs according to the policy.

In order to see the SandBlast report please click on threat emulation reports and chose the relevant operating system.

After showing and explaining the report conclude the demo stating that the implementation of this technology is seamless and is a two-step configuration, there is nothing that the customer/admin needs to do in terms of his MX record or infrastructure.
